

LUNGER

BFE Services Final Inspection Machine (Lunger) is manufactured in different sizes

- 8, 10, 12 and 16 units are available to suit both Pipe or Tee track
- The drive is received from the overhead conveyor
- It will operate both lines, with or without feet
- The bird is automatically positioned on the machine where the unit moves up and down twice inside the bird
- The machine is designed so that the vacuum nozzle is prevented from descending when the shackle is empty allowing minimal vacuum loss and a significant reduction in noise output
- Spray nozzles clean each unit before the next cycle
- The Final Inspection Machine is made of stainless steel incorporating food approved plastics
- Each machine comes with a stainless steel hydraulic hand pump and cylinder for effortless height adjustment.
